

VACCINATION ASSESSMENT TOOL

Task:	
Address:	

The vaccination assessment tool consists of four factors. You will need to answer 'yes' to at least three factors before it would be reasonable to require vaccination for workers who carry out that work.

You need to consult with your workers and their representatives when applying the tool and also about any other appropriate alternative COVID-19 control measures.

Factor	Lower Risk	Higher Risk
Does the worker work in an indoor space that is less than 100m²?	NO	YES
Is it unreasonable for the worker to maintain 1 metre physical distancing from other people?	NO	YES
Is the worker in close proximity to any other person for more than 15 minutes?	NO	YES
Does the worker provide services to people who are vulnerable to COVID-19?	NO	YES
Other control measures we will implement to minimise the risk of COVID-19 at work:		
Does this task require vaccinated workers:	NO	YES
If you choose not to implement the tools outcome recommended by this assessment you must be prepared to justify your decision.
